Summary

Senior Mobile Engineer with 14+ years of experience building production software that real people use every day — from the Android 2.2 and ActionBarSherlock era to Kotlin, Jetpack, Compose, and modern app architectures. Most experienced with Android native development, with production experience in iOS and cross-platform technologies (Kotlin Multiplatform, React, Flutter). Passionate about building teams from scratch, following best practices, and setting everything up for success — scalable architecture, mentoring, and remote collaboration across startups and large enterprises.

Focused on the next major shift in software engineering: **AI-first and agentic engineering** — how LLMs, AI coding agents, and agentic workflows change the way we design, build, test, and maintain software. Open to international remote opportunities.

For more details on my experience or to request references, feel free to reach out on [LinkedIn](#).

Experience

Senior Mobile Engineer · Team Lead, Signos – Remote Apr 2023 – present

Leads Signos' Android team for a continuous glucose monitoring (CGM) health platform used for metabolic-health and weight-management programs.

- Lead the Android team end-to-end — planning, architecture, code review and delivery milestones — in close partnership with product, design and QA.
- Owned the Stelo/G7 CGM hardware integration and kept the legacy G6 pipeline stable in production across the device transition.
- Sustained a **+98% crash-free rate** (Firebase) on a **4.2★** rated app with **weekly internal test builds** and **bi-weekly releases** to users.
- Implemented a menstrual cycle tracking tool end-to-end, low-glucose event tracking, and large-scale refactors of major code areas; led UI redesigns across large parts of the app.
- Drive AI-first, agentic engineering on the team — coding agents (Claude Code, Codex, OpenCode, CodeGraph) handle a meaningful share of implementation, review and test generation.

Senior Android Engineer, Sandboxx – Remote · Contract · [Google Play](#) Nov 2022 – Apr 2023

Shipped long-overdue features (phone-number sign-up, "Muster" recruit messaging) and modernized DI and multi-module architecture in a legacy codebase.

Android Tech Lead · Mobile Engineer Manager, Glide / Compass – Remote Oct 2021 – Nov 2022

Real-estate transaction management platform acquired by Compass. Built the Glide Android app from the ground up, then managed a 4-person team across Android and iOS.

- Built the Glide Android app from zero — foundation architecture, release pipeline and app-store launch — for one of the largest real-estate platforms in California.
- Managed a 4-person mobile team across Android and iOS, guiding members through the Compass acquisition and post-acquisition onboarding.
- Set up in-memory caching with Room and a multi-module Dagger/Hilt graph (SubComponents) that kept shared code clean across features.

Android Tech Lead, Jyve – Remote Apr 2021 – Oct 2021

Led a Java→Kotlin migration and a job-scheduling feature for a freelance retail platform. Company ceased operations in Oct 2021.

Android Tech Lead, Theorem (Citrusbyte) – Remote

Oct 2018 – Apr 2021

Tech lead for First American, the largest title-insurance company in the US. Also delivered an iOS retail project for Apple.

- Led development of the ClarityFirst Android app from scratch — architecture, build, release and post-launch handover (KTLO) to the client's internal team.
- Led biometric lock-screen R&D across Android and iOS, influencing the security approach for both platforms.

Senior Android Engineer, SI Play / SportsEngine – Remote

Sept 2016 – Mar 2018

Youth-sports platform acquired by SportsEngine/NBC. Scaled the app to ~300k DAU; migrated MVP→MVVM, single→multi-module, and added offline-first support with RxJava.

Senior / SSR Android Engineer, Globant · Truelogic · GlobalLogic – Remote & Onsite

July 2015 – Oct 2018

Senior Android roles for US clients: Royal Caribbean passenger app (Globant), US client apps (Truelogic), and DirecTV antenna-alignment tool + Gulfstream in-flight apps (GlobalLogic).

Mobile Engineer · Software Consultant, Arzion · San Martín University – Onsite

May 2012 – July 2015

Early career: radio-streaming, e-commerce and beacon-based social apps (Arzion); first mobile work on an educational app, from PhoneGap/HTML5 to native Android (San Martín).

Skills

Languages: Kotlin, Java, Swift, Rust, Python

Android: Jetpack Compose, Coroutines, Flow, Room, Realm, Hilt, Dagger, Koin, Gradle

Architecture: MVVM, MVP, Clean Architecture, Multi-module, Offline-first, DI

Platforms: Android, iOS, Kotlin Multiplatform

Testing & CI/CD: Unit Testing, Espresso, Maestro, Robolectric, Bitrise, GitHub Actions, Jenkins

AI & Agentic Engineering: Agentic Workflows, LLMs, Claude Code, Codex, OpenCode, CodeGraph

Languages

Spanish: Native

English: Professional
